

Objective:

Analyze bike station availability and operational efficiency across cities.

Insights:**High Performing Cities**

- Cities with highest average bike utilization.
- Indicates strong demand.

Underperforming Cities

- Low utilization.
- Many bikes remain unused.

Empty Stations

- Frequently run out of bikes.
- Need redistribution.

Full Stations

- Lack docking space.
- Users may struggle to return bikes.

Operational Status

- Percentage of stations currently open.

Recommendations**1. Bike Rebalancing**

Move bikes from low-demand stations to high-demand stations.

2. Increase Capacity

Expand stations that are consistently full.

3. Improve Maintenance

Investigate stations frequently closed.

4. Demand Forecasting

Use utilization trends to predict bike demand.
